

# WideSky Utility Insights

The intelligent utility data management platform delivering insights for the next generation of sustainable businesses

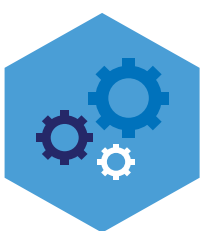

WideSky® Utility Insights is a smart, cloud-based solution that simplifies utility management by providing immediate visibility on usage, spend, emissions and ESG performance, to enable actionable insights.

WideSky® Utility Insights is easy to implement, capturing data from utility invoices, interval data, site meters, and working with your existing systems to streamline the collection of critical sustainability data at a fraction of the effort and cost of manual alternatives.

Through scheduled reports, tailored alerts and intelligent analytics, WideSky® Utility Insights turns data into actionable insights driving company wide initiatives that minimize ESG impacts, while identifying opportunities to unlock savings.

**Typically 2%-5% in cost reduction opportunities identified each year**

**Benchmarking, tracking & management of utility usage & ESG drivers**

**Integrate with existing platforms & systems, merging data into a single view**

**Streamlined data capture & reporting, saving time, operating costs, & improving accuracy**

**Provides transparent & auditable ESG tracking & reporting**

**Proactive management using push reports, notifications & alerts**

## Features & Benefits

- ▶ Simple, single view of all utilities making it easy to track and manage spend, usage, emissions, and ESG footprint from any device.
- ▶ Historical invoice & data collection and integration for quick benchmarking and future target setting.
- ▶ Date range, utility, account, vendor, or device filters for greater reporting depth, with custom grouping of company, trading brand, payment group etc.
- ▶ Permissions based access for different stakeholder across finance, sustainability, procurement, maintenance and operations, accounts payable etc.

## Invoice and Data Collection & Management

- ▶ Automatically collect, manage and store invoices and data directly from suppliers.
- ▶ Set up electronic invoice feeds for suppliers where possible to ensure automatic arrival of invoices and data.
- ▶ Identify billing errors, missing invoices & duplicates and expedite late arriving invoices and data.
- ▶ Merge data from other systems and meters to add broader value to performance and savings initiatives.

## Alerts & Reports

- ▶ Easily manage abnormal usage, spend and emissions with dashboard alerts or email notifications.
- ▶ Set targets, customize thresholds, and monitor performance to determine sites or accounts that aren't performing to expectations or are out of tolerance.
- ▶ Identify anomalies, outliers, and data integrity issues as they arise for immediate response.
- ▶ Invoice, contract & environmental compliance via document storage and expiry alerting.

## Commercial Model & Support Framework

- ▶ Cost effective monthly SAAS subscription costs (<1 year payback)
- ▶ Access to a dedicated single point of contact for all queries.
- ▶ Ongoing service & technical support, regular updates, and new functionality.
- ▶ Direct assistance with upgrading dashboards, adding new devices/functions/features, troubleshooting issues etc.

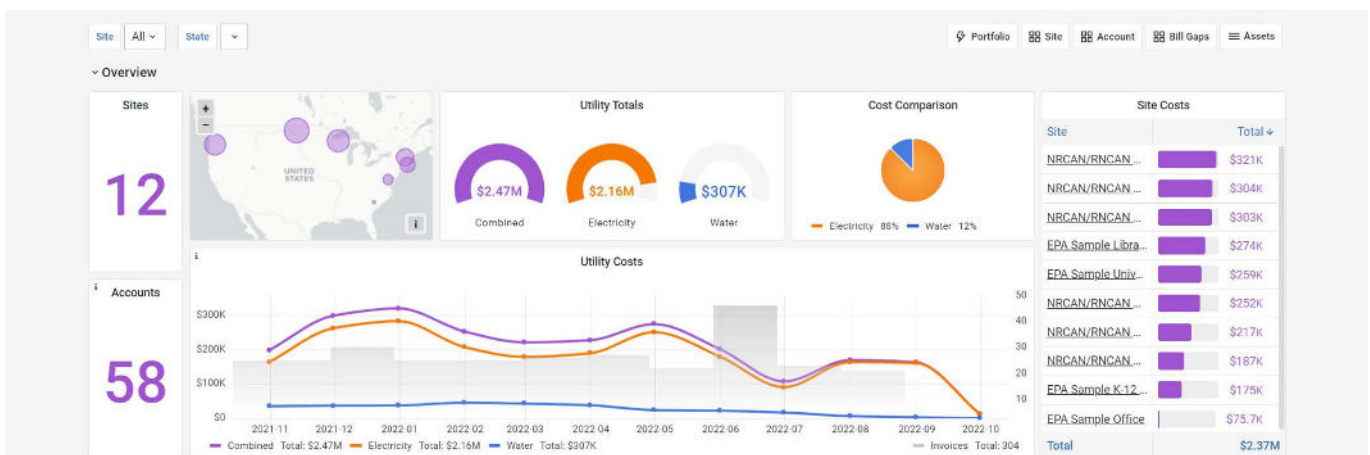

## Accounts Payable Reporting

- ▶ Payment file creation to transmit and receive data to and from customer's accounting system.
- ▶ Files presented to users in easy-to-use dashboard enabling retrieval in CSV file format, and to email.
- ▶ Payment file includes invoices, vendors, cost center, site address, business unit, GL code, cost code, invoice periods and values, grouped to meet business requirements

## Contract & Document Management

- ▶ Integrate and manage utility bills, supply contracts, and environmental certification documents, with easy retrieval and version management.
- ▶ Enable custom benchmarking of contracts within and among locations.
- ▶ Identify contract outliers based on delivered energy rates & tailor advance notifications of contracts or documents nearing expiry.

## Easy to use dashboards delivering actionable insights
